Claims

5 Sub 02 1. A method to treat a mammalian subject for a condition benefited by stimulating hair growth which method comprises administering to said mammalian subject in need of such treatment an effective amount of a compound that inhibits the activity of NF- κ B or that inhibits proteasomal activity or that inhibits production of these proteins.

2. The method of claim 1 wherein said compound inhibits proteasomal activity or that inhibits production of proteasome proteins.

10 3. The method of claim 2 wherein said compound is lactacystin or a peptidyl aldehyde.

15 4. A pharmaceutical composition for treating for a condition benefited by stimulating hair growth which composition comprises a compound that inhibits the activity of NF- κ B or that inhibits proteasomal activity or that inhibits production of these proteins.

20 5. The pharmaceutical composition of claim 4 wherein said compound is lactacystin or a peptidyl aldehyde.

25 6. A method to identify a compound which stimulates hair growth which method comprises subjecting said compound to an assay for determining its ability to inhibit NF- κ B activity, whereby a compound which inhibits the activity of NF- κ B is identified as a compound which enhances hair growth; or

subjecting said compound to an assay for determining its ability to inhibit the production of NF- κ B, whereby a compound which inhibits the production of NF- κ B is identified as a compound which enhances hair growth; or

- 20 -

subjecting a candidate compound to an assay to assess its ability to inhibit proteasomal activity, whereby a compound which inhibits proteasomal activity is identified as a compound that enhances hair growth; or

5 subjecting a candidate compound to an assay to assess its ability to inhibit the production of enzymes with proteasomal activity, whereby a compound which inhibits the production of enzymes with proteasomal activity is identified as a compound that enhances hair growth.
